

Today environment has become a priority for many countries seeking to ensure a stable condition of earth for current and future generations. However, rapid expansion of the rapidly expanding of environmental al-problems convert this local issue to an international one. That is to say, the further an environmental task gets s larger, the larger international cooperation we need. In addition, there is are a huge amount of destruction in nature which are-is related to international activities such as producing greenhouse gases, deforestation by multi-national companies as well as water misuse.

To begin with, the whole countries, all over the world, more or less have engaged in industrial activities that result in greenhouse gases es emissions s. Thus, the current extent ant of these substances is a direct consequence of the world-wide attempt for te industrialization. To make an example, companies that destroy Amazon forests to build new roads are by and large foreign-Since, Road construction and logging/wood trading are a couple of the most profitable businesses throughout the world. In this case, international committees and particularly United Nations force industrial countries to dedicate considerable funds in order to plan and implement environmentally friendly proposals.

Moreover, some of the environmental problems are both highly hazardous and very urgent which require international movements. In other words, these kinds of issues not only have negatively impacted on negatively on national nature and treasures of a nation society, but also on people's health and lives. For instance, droughts s which will occur in following years in my hometown are predicted will-be able to kill thousands hundreds of people in dessert areas.

To put it in a nutshell, although a few certain countries are the main culprits behind environmental crisis, entire nations should be responsible for/about the future and present condition of our planet.
